CLASSIFICATION OF HIGH SPATIAL RESOLUTION IMAGES USING SEMANTIC ALLOCATION LEVEL –PROBABILISTIC TOPIC MODEL

AIM

To capture the information from the High Spatial Resolution images on the basis of an image representation and latent semantic allocation procedure

STEPS INVOLVED

- Feature Description Method
- Image Representation Generation Strategy
- Latent Semantic Allocation Mining Procedure

FLOWCHART OF SCENE CLASSIFICATION

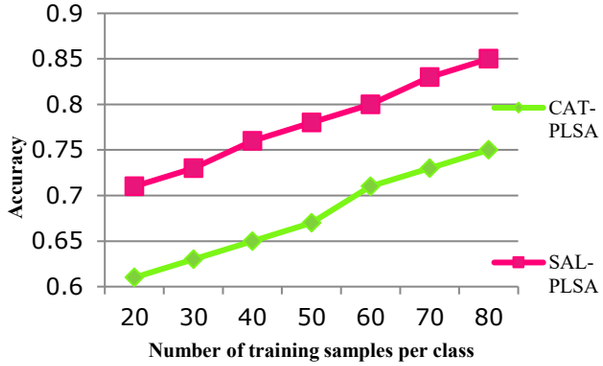
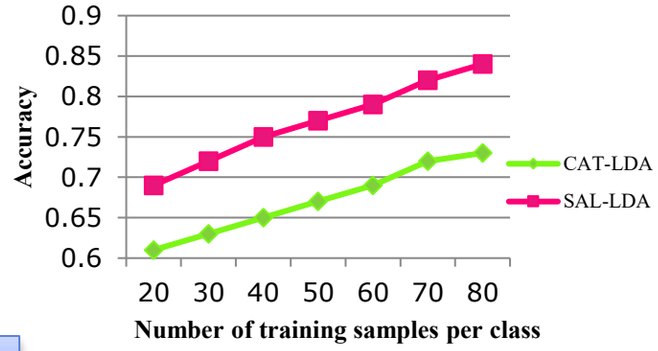
RESULTS





CONCLUSION

- Results on the challenging data sets demonstrate the superiority of the feature learned by SAL – PTM .
- Classification accuracy has been improved.
